

In December 2016 **Bridgeway Aerial*** was appointed by Crossrail to carry out 4k video filming at the newly constructed Acton dive-under and Stockley fly-over.

The objective was to use the film to inform rail users and the general public about works undertaken at the two sites during 2016.

The work was done using the **Approval to operate in Congested Areas**, and had to be coordinated with NATS (National Air Traffic Services) and Heathrow ATC, given its location.

A lightweight UAV was used over live rail, in accordance with Network Rail's policy. The flight crew operated from a position of safety, away from the trackside environment and no T3 possessions or line blockages were required.
